

Curriculum					
Modules	Topic	Sub topic	Detail	Outcome	Duration Min
1	DevOps Fundamentals	Introduction to DevOps	Principles, culture, benefits	Understand DevOps philosophy	45
1		DevOps Lifecycle	Continuous Integration, Delivery,	Grasp DevOps workflow	45
1		DevOps Tools Overview	Categories of tools in DevOps	Familiarize with DevOps toolchain	45
2	Version Control	Git Basics	Repositories, commits, branches	Manage code versions effectively	45
2		Advanced Git	Merging, rebasing, Git workflow	Master advanced Git operations	45
2		Git Hosting Platforms	GitHub, GitLab, Bitbucket	Use remote repositories	45
3	Continuous Integration	CI Concepts	Build automation, testing	Understand CI principles	45
3		Jenkins	Installation, jobs, pipelines	Set up CI pipelines with Jenkins	60
3		GitLab CI	CI/CD pipelines in GitLab	Implement CI with GitLab	45
4	Configuration Management	Infrastructure as Code	IaC concepts, benefits	Understand IaC principles	45
4		Ansible	Playbooks, roles, modules	Automate configuration with	60
4		Puppet	Manifests, modules, Hiera	Manage configurations with	60
5	Containerization	Docker Basics	Images, containers, Dockerfile	Create and manage containers	60
5		Docker Compose	Multi-container applications	Orchestrate containers locally	45
5		Docker Networking & Storage	Volumes, networks	Manage container data and	45
6	Container Orchestration	Kubernetes Architecture	Pods, services, deployments	Understand Kubernetes	60
6		Kubernetes Deployment	Manifests, kubectl	Deploy applications on	60
6		Kubernetes Management	Scaling, updates, monitoring	Manage Kubernetes clusters	60
7	Infrastructure Provisioning	Terraform Basics	HCL, providers, resources	Provision infrastructure as code	60
7		Terraform Advanced	Modules, state management	Master advanced Terraform	60
7		CloudFormation	Templates, stacks	Provision AWS resources	45
8	Monitoring and Logging	Prometheus	Metrics, alerting	Monitor applications and	60
8		Grafana	Dashboards, visualizations	Create monitoring dashboards	45
8		ELK Stack	Elasticsearch, Logstash, Kibana	Centralize and analyze logs	60
9	Continuous Deployment	CD Concepts	Deployment strategies, rollbacks	Understand CD principles	45
9		ArgoCD	GitOps, application deployment	Implement CD for Kubernetes	60
9		Spinnaker	Pipelines, deployments	Automate multi-cloud	60
10	Cloud Platforms	AWS DevOps	CodePipeline, CodeBuild,	Implement DevOps on AWS	60
10		Azure DevOps	Pipelines, Repos, Boards	Use Azure DevOps services	60
10		GCP DevOps	Cloud Build, Cloud Deploy	Implement DevOps on GCP	45
11	Security in DevOps	DevSecOps	Security integration in CI/CD	Understand DevSecOps principles	45
11		SAST & DAST	Static and dynamic security	Implement security testing in	60
11		Secrets Management	Vault, cloud key management	Secure sensitive information	45
12	Site Reliability Engineering	SRE Principles	SLIs, SLOs, error budgets	Understand SRE concepts	45
12		Chaos Engineering	Principles, tools (Chaos Monkey)	Improve system resilience	60
12		Incident Management	On-call, postmortems	Handle and learn from incidents	45
13	DevOps Practices	Agile and DevOps	Scrum, Kanban in DevOps	Align Agile and DevOps practices	45
13		DevOps Metrics	DORA metrics, measurement	Measure DevOps performance	45
13		DevOps Culture	Collaboration, continuous	Foster DevOps culture	45
